### Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

1. (currently amended) A method for managing content rich data residing on a removable memory apparatus that has been inserted into a handheld device, comprising:

searching for at least one content cookie having a counter that may be programmed into memory residing within the handheld device;

installing at least one content cookie, having a counter, from the removable memory apparatus onto the handheld device if no content cookie was found when searching for the at least one content cookie;

searching within the handheld device for a content player enabled to present the content rich data;

installing a content player enabled to present the content rich data if a content player enabled to present the content rich data does not exist on the handheld device;

launching ~~a~~ the content player enabled to present the content rich data;

presenting the content rich data within the handheld device via the content player; and  
decrementing the counter of the at least one content cookie.

2. (original) The method of claim 1, wherein the content rich data is multimedia data.

3. (original) The method of claim 1, wherein the content rich data is at least one graphical image.

4. (original) The method of claim 1, wherein the content rich data is an audio file.

Applicant : Johnathan P. Tann  
Appl. No. : 10/632,335  
Examiner : Adam M. Queler  
Docket No. : 13552.4003

5. (original) The method of claim 1, wherein the handheld device has a display screen, and the method further comprises the step of displaying the content rich data on the screen.
6. (original) The method of claim 1, wherein the removable memory apparatus is a memory stick.
7. (original) The method of claim 1, wherein the removable memory apparatus is a solid state memory apparatus.
8. (original) The method of claim 1, wherein the removable memory apparatus is a micro-mechanical drive.
9. (withdrawn) The method of claim 1, wherein if the counter of the at least one content cookie has reached a maximum value, then the method further comprising removing the content rich data from the handheld device.
10. (withdrawn) The method of claim 1, wherein if the counter of the at least one content cookie has reached a maximum value, then the method further comprising removing the content rich data from the removable memory apparatus.

Appl. No. : 10/632,335  
Examiner : Adam M. Queler  
Docket No. : 13552.4003

11. (original) A computer program product that includes a computer-usable medium having a sequence of instructions which, when executed by a processor, causes said processor to execute a process for displaying content rich data residing on a removable memory apparatus within a handheld device soon after the device is inserted into the handheld device, said process comprising:

searching for at least one content cookie having a counter that may be programmed into memory residing within the handheld device;

installing at least one content cookie, having a counter, on the handheld device if no content cookie was found when searching for the at least one content cookie;

launching a content player;

presenting the content rich data within the handheld device via the content player; and  
decrementing the counter of the at least one content cookie.

12. (original) The computer program product of claim 11, wherein the content rich data is multimedia data.

13. (original) The computer program product of claim 11, wherein the content rich data is at least one graphical image.

14. (original) The computer program product of claim 11, wherein the content rich data is an audio file.

Applicant : Johnathan P. Tann  
Appl. No. : 10/632,335  
Examiner : Adam M. Queler  
Docket No. : 13552.4003

15. (original) The computer program product of claim 11, wherein the handheld device has a display screen, and the method further comprises the step of displaying the content rich data on the screen.

16. (original) The computer program product of claim 11, wherein the removable memory apparatus is a memory stick.

17. (original) The computer program product of claim 11, wherein the removable memory apparatus is a solid state memory card.

18. (original) The computer program product of claim 11, wherein the removable memory apparatus is a micro-mechanical drive.

19. (withdrawn) The computer program product of claim 11, wherein if the counter of the at least one content cookie has reached a maximum value, then the method further comprising removing the content rich data from the handheld device.

20. (withdrawn) The computer program product of claim 11, wherein if the counter of the at least one content cookie has reached a maximum value, then the method further comprising removing the content rich data from the removable memory apparatus.

21. (New) The method of claim 1, wherein the handheld device is communicatively coupled to the Internet and further wherein the content rich data includes one or more links to one or more Websites associated with the content rich data.

22. (New) The method of claim 21, wherein the one or more links are hyperlinks that, when invoked by a user, will launch a Web browser and open a webpage associated with the hyperlink.

23. (New) The computer program product of claim 11, wherein the handheld device is communicatively coupled to the Internet and further wherein the content rich data includes one or more links to one or more Websites associated with the content rich data.

24. (New) The computer program product of claim 23, wherein the one or more links are hyperlinks that, when invoked by a user, will launch a Web browser and open a webpage associated with the hyperlink.

25. (New) The method of claim 1, the method further comprising removing the content rich data from the handheld device when the counter reaches zero.

26. (New) The method of claim 1, the method further comprising updating the content rich data when the counter reaches zero and restarting the counter.

27. (New) The method of claim 21, the method further comprising sending a notification to the one or more Websites associated with the content rich data when the counter reaches zero.
